ABOUT

Product-driven Full-Stack Developer with over 2 years of professional experience, specializing in TypeScript, React, and Node.js ecosystems. Proven track record of architecting scalable microservices and offline-first applications. Strong advocate for Clean Code and YAGNI principles. Based in Tokyo, currently on a Student Visa (fully eligible for transition to an Engineering/Humanities working visa), expanding my technical boundaries with AI-integrated pipelines while actively mastering Japanese.

TECHNICAL SKILLS

- **Frontend:** React.js, Vue.js, Next.js
- **Backend:** Node.js, Express.js, MongoDB, Bun, Nestjs
- **Styling & UI:** TailwindCSS, UnoCSS, SCSS
- **State Management:** Redux Toolkit, Context API, Vuex, Reactive
- **Testing:** Jest, Vitest
- **Web Performance:** Lazy Loading, Code Splitting, SSR/CSR/SSG/ISR, SEO
- **Collaboration & Product:** Cross-functional Meetings, Feature Planning, Stakeholder Communication
- **Development Workflow:** Agile, Scrum, GitHub Actions, Docker

WORK EXPERIENCE

Frontend Developer

Feb 2024 – Mar 2026 | Efilli

Context: Efilli provides consent management and digital compliance solutions for major corporate clients.

Responsibilities:

- Engineered scalable web solutions using modern JavaScript/TypeScript ecosystems, consistently delivering maintainable code.
- Collaborated closely with cross-functional teams and technical leadership to translate product requirements into robust, deployable features.

Achievements:

- Led the "Automated Data Scraping Initiative," developing an automated architecture that processed 1,000+ records efficiently, directly driving business data acquisition.
- Architected and integrated a comprehensive A11y Compliance Platform across digital products, ensuring global accessibility standards were met and expanding user reach. Tech Stack: React, TypeScript, Node.js, Web Scraping Tools. [\[View Platform Architecture & Details\]](#)

Frontend Developer (Part-Time & Intern)

Aug 2023 – Feb 2024 | Efilli

Responsibilities:

- Developed browser automation scripts for navigation and event tracking, integrating them into functional user dashboards.
- Authored and maintained comprehensive documentation for frontend projects.

Achievements:

- Developed a specialized Chrome extension leveraging Vue.js, TypeScript, and Chrome APIs to significantly automate repetitive browser actions.
- Created and deployed cookie consent banners for major corporate clients, ensuring strict compliance and seamless user experiences across multiple platforms. Tech Stack: Vue.js, React.js, TypeScript, UnoCSS.

Web Content Manager

Dec 2019 – Dec 2024 | Umutvadi

Context: Managed the digital presence and content strategy for a highly trafficked web platform.

Responsibilities:

- Led the overarching design, content strategy, and SEO optimization from the platform's inception.

Achievements:

- Created and published over 120 heavily SEO-optimized articles, driving organic engagement and attracting more than 2 million unique visitors. Tech Stack: SEO (On-page/Off-page), Content Management Systems

PROJECTS

Japanese C2C Second-Hand Marketplace

A localized, high-performance customer-to-customer marketplace platform for buying and selling used goods, heavily optimized for Japanese search engines and user experience.

Tech Stack: Next.js 16, Prisma, PostgreSQL, Cloudflare R2, Docker Compose.

- Developed a high-performance marketplace focusing on technical SEO, fast page loads, and robust i18n routing strategies.
- Optimized media delivery pipelines utilizing Cloudflare R2 and ThumbHash, and built full-text search capabilities backed by PostgreSQL.

Scrape & Compare (AI-Powered Job Matching Engine)

An automated, AI-driven platform designed to scrape job boards and intelligently score job listings based on a candidate's profile, significantly optimizing the job-hunting process.

Tech Stack: TypeScript, NestJS, Next.js 15, PostgreSQL, BullMQ, Redis, Playwright, Google Gemini LLM.

- Architected an asynchronous background processing microservice using BullMQ and Redis to orchestrate data scraping tasks and AI-scoring batches.
- Implemented adaptive backoff and dynamic pagination strategies to bypass bot detection, successfully processing 50+ listings per execution.

Local Sales System (Offline-First POS & Digital Ordering)

A comprehensive Point-of-Sale (POS) and digital ordering solution tailored for local Japanese businesses, designed to function seamlessly even during internet outages.

Tech Stack: React, Fastify, SQLite (Drizzle ORM), Electron, Docker, Socket.IO.

- Designed an offline-first monorepo architecture, deployable as a local Electron desktop application and a cloud-hosted Docker image.
- Engineered real-time bidirectional data synchronization via Socket.IO and built a secure, asymmetric software licensing system using Ed25519 signatures.

EDUCATION & LANGUAGES

Bilecik Şeyh Edebali Üniversitesi – BSc in Computer Science (2019 - 2024) - 3.22

Turkish (Native), English (Professional Working Proficiency), Japanese (N4 Level)
